

Advance Technologies & Methods

- **Multimedia**
- **Animated PPTs**
- **PPTs**
- **Audio/Videos**

Multimedia is content that uses a combination of different content forms such as text, audio, images, animation, video and interactive content.

Use of Multimedia : Provides students with opportunities to represent and express their prior knowledge."Allow students to function as designers, using tools for analyzing the world, accessing and interpreting information, organizing their personal knowledge, and representing what they know to others." Multimedia applications engage students and provide valuable learning opportunities. Empower students to create and design rather than "absorbing representations created by others." Encourages deep reflective thinking.

Use of Animated PPTs & PPTs: Animation can help make a Microsoft PowerPoint 2010 presentation more dynamic, and help make information more memorable.

Use of Audio/Videos: Using Projector the teaching learning is enhanced because visual effects lay a long term impact on memory of the students and it is more influential process in comparison to blackboard teaching.
